The Master of Science degree in Agribusiness and Applied Economics offers coursework focusing on applied economics, agribusiness, and transportation and logistics.

The applied economics coursework in economic theory, research methods, and quantitative techniques is designed to prepare students for careers in agricultural economics research in private and public sectors and for Ph.D. programs.

The agribusiness courses are broad-based and combine training in agribusiness management, economic analysis, and agricultural sciences. Training may include biotechnology, processing, and food and environmental safety. Students are prepared for a variety of successful careers in agribusiness by fulfilling the requirements for expertise in quantitative methods and developing a rigorous background in economic theory and research.

Students have complete access to well-equipped research facilities and to faculty supervision time. The department has an excellent placement record with national and international agricultural and business firms, as well as government agencies.
