

Cybersecurity Certificate

The need for cybersecurity professionals is rapidly growing. Nearly every government, military, financial institution, medical establishment, and viable businesses collect, process, and store confidential information in databases. Cyber-attacks and digital spying can take many forms, including high visibility and very damaging offenses such as data breaches, phishing, and identity theft. Attacks can take place within databases, while data is processed, or when it is transmitted across networks. In the world of today, cyber-attacks may be a greater threat than terrorism.

Enrolled students will take courses online or on-campus and learn about best practices, new technology, and research in cybersecurity. The certificate program can be completed completely online or through a combination of online and on-campus courses.

Completion of the Graduate Certificate in Cybersecurity requires completion of 12 graduate credits. This includes three required courses as well as one elective course.
